

## Vernatherm™ Thermostatic Mixing Valve

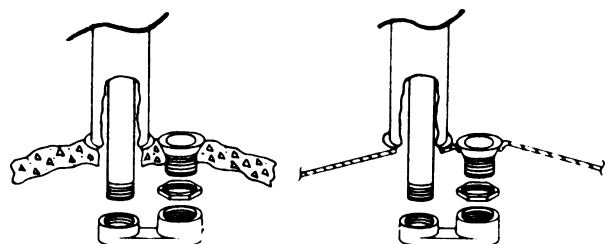

- A.S.S.E. 1070 Certified Adjustable Mixing Valve

## Paper Towel Dispenser Assemblies

Dispenser assemblies mount above the sprayhead or soap dispenser to provide convenient hand drying facilities for washfountain users and to help keep floor dry around washfountain. Assemblies mount on 1-1/2" tie pipe furnished by contractor and consist of towel dispensers, mounting frames with pipe clamps, tie pipe/drain line adapter, and chrome-plated tube to cover exposed portion of pipe. Assemblies used on circular washfountains are triangular shaped and have three dispensers; assemblies used on semi-circular and corner washfountains are "V" shaped and have two dispensers. Available for single-fold or C-fold towels.

## Tie Pipe Assembly

Use of tie pipe assembly is recommended on circular, semi-circular, and corner washfountains without centrally rising vents, wherever extra vandal resistance is required. Special bracket ties into drain line and accepts 1-1/2" tie pipe (furnished by contractor) which replaces standard tie rod. It provides additional strength and rigidity for support tube assembly. (Tie pipe arrangement is included as part of towel dispenser assemblies.)

## Hose Bibb

Loose key, threaded hose bibb has polished chrome finish. Ideal for washing down tile floor, filling buckets, more. Projects through pedestal panel.

## Stainless Steel Shroud

Stainless steel telescoping shroud assemblies to conceal overhead supply or vent piping. Assembly consists of a ceiling flange with 12" (305) slip ring extension which telescopes into 4" (102) diameter tube extending up from top of washfountain soap dispenser or sprayhead. Ceiling flange has clearance holes for 5/16" screws (not furnished). Telescoping feature allows a minimum of 3" (76) for access to supply connections at washfountain top. Shroud is secured to flanged dispenser or sprayhead cover by three vandal-resistant screws.

## Soap Dispensers for Classic Washfountains

Classic and Terreon® deep bowl washfountains are available with optional nylon liquid soap dispensers or powdered soap dispensers. Metal-clad dispensers (with black nylon lid) are also available.

## Soap Dispensers for Multi-Fount Washfountains

Terrazzo and Terreon Multi-Fount® washfountains are available with optional liquid soap dispensers. Vandal-resistant soap valves are mounted to the backsplash and are connected to the soap tank, which is safely concealed inside the pedestal.

## Soap Dispensers for Sentry Washfountains

Sentry™ washfountains are available with optional liquid soap dispensers. Vandal-resistant soap valves are firmly secured to the bottom of the soap tank, which is safely concealed inside the stainless steel sprayhead assembly.
