

Installation

WF2500 Series Terreon Classic
WF2600 Series Terrazzo
WF2700 Series Stainless Steel
WF2800 Series Bradstone
WF3200 Series Terreon Deep Bowl
TDB3100 Series Terreon Deep Bowl

WARNING

Make sure that all water supply lines have been flushed and then completely turned off before beginning isntallation. Debris in the supply lines can cause valves to malfunction.

Turn OFF electrical supply to the unit before installation.

NOTICE

Main water supply to the unit should be "ON" at all times.

IMPORTANT

Read this installation manual completely to ensure proper installation, then file it with the owner or maintenance department. Compliance and conformity to drain requirements and other local codes and ordinances is the responsibility of the installer.

Separate parts from packaging and make sure all parts are accounted for before discarding any packaging material. If any parts are missing, do not begin installation until you obtain the missing parts.

Product warranties and parts information may also be found under "Products" on our web site at bradleycorp.com.

Cleaning and Maintenance WF2500, WF2600, WF2700, WF2800, WF3200, TDB3100 Series

Cleaning and Maintenance for Terreon®

Material Description: Terreon is a densified solid surface material composed of bio based resin and is resistant to chemicals, stains, burns and impact. Surface can be easily repaired with everyday cleansers or fine grit abrasives. Because Terreon is a unique cast material, its aggregate flow and distribution, and shades of color can vary from product to product creating natural characteristics.

Routine Cleaning: For regular cleaning, use mild neutral base cleaners.

Stubborn Stains: Remove tough stains with Soft-Scrub® and a green Scotch-Brite® pad or lightly sand in a circular motion with 240 grit wet/dry sandpaper. The finish can then be renewed with a maroon Scotch-Brite pad.

Scratches: Remove scratches with a green Scotch-Brite pad. The finish can then be renewed with a maroon Scotch-Brite pad.

Hard Water Deposits: Remove hard water deposits with a mild solution of vinegar and water. Always rinse the unit thoroughly after cleaning.

Restoring the surface: Use Hope's Perfect Countertop to refresh and protect the Terreon Solid Surface material. Dark Terreon colors may require additional care and maintenance. For complete instructions on this additional maintenance, visit bradleycorp.com.

Repair Kits: Terreon repair kits are available. Contact your Bradley representative or distributor for part numbers and pricing. Repair kits are made to order and have a shelf life of 30 days.

NOTICE! Do not use strong acid or alkaline chemicals and cleaners to clean Terreon. If these chemicals come in contact with the surface, wipe them off immediately and rinse with soapy water. Avoid contact with harsh chemicals such as paint remover, bleach, acetone, etc. Avoid contact with hot pans and objects.

Cleaning and Maintenance for Stainless Steel

Material Description: Stainless steel is extremely durable, and maintenance is simple and inexpensive. Proper care, particularly under corrosive conditions, is essential. Always start with the simplest solution and work your way toward the more complicated.

Routine cleaning: Daily or as often as needed use a solution of warm water and soap, detergent, or ammonia. Apply the cleaning solution per the manufacturer's instructions and always use a soft cloth or sponge to avoid damaging the finish.

Stubborn Stains: To remove stains from stainless steel use a stainless steel cleaner and polish such as Ball® stainless steel cleaner or a soft abrasive. Always follow the manufacturer's instructions and apply in the same direction as the polish lines.

NOTICE! Never use ordinary steel wool or steel brushes on stainless steel. Always use stainless steel wool or stainless steel brushes.

Fingerprints and Smears: To remove fingerprints or smears use a high quality stainless steel cleaner and polish in accordance with the manufacturer's instructions. Many of these products leave a protective coating that helps prevent future smears and fingerprints.

Grease and Oil: To remove grease and oil use a quality commercial detergent or caustic cleaner. Apply in accordance to the manufacturer's instructions and in the direction of the polish lines.

Precautions: Avoid prolonged contact with chlorides (bleaches, salts), bromides (sanitizing agents), thiocyanates (pesticides, photography chemicals, and some foods), and iodides on stainless steel equipment, especially if acid conditions exist.

NOTICE! Do not permit salty solutions to evaporate and dry on stainless steel.

The appearance of rust streaks on stainless steel leads to the belief that the stainless steel is rusting. Look for the actual source of the rust in some iron or steel particles which may be touching, but not actually a part of the stainless steel structure.

NOTICE! Strongly acidic or caustic cleaners may attack the steel causing a reddish film to appear. The use of these cleaners should be avoided.

Brand Names

Use of brand names is intended only to indicate a type of cleaner. This does not constitute an endorsement, nor does the omission of any brand name cleaner imply inadequacy. Many products named are regional in distribution, and can be found in local supermarkets, department and hardware stores, or through your cleaning service. It is emphasized that all products should be used in strict accordance with package instructions.

Cleaning and Maintenance WF2500, WF2600, WF2700, WF2800, WF3200, TDB3100 Series

P.O. Box 309 • Menomonee Falls, WI 53052-0309 • 1 800 BRADLEY • 262 251 6000 • bradleycorp.com

Cleaning and Maintenance for Terrazzo

Material Description: Terrazzo is a mosaic-looking natural stone and concrete material polished to a high gloss and sealed with clear polyurethane resin for long lasting beauty. Terrazzo is precast and composed of 85% stone and 15% binder with steel reinforcing rods cast into the bowl.

Routine Cleaning: Clean daily or as often as conditions require with any standard detergent, warm water and a soft cloth. **Stubborn Stains:** If stains have permeated the surface of the terrazzo, follow instructions for restoring the surface listed below.

Restoring the surface: Use paint stripper to remove the existing polyurethane (it is important to remove all of the old polyurethane to ensure a high quality finish). Then use light grit sand paper to remove any stubborn staines that have permeated the surface. Clean and thoroughly dry the bowl. Then apply 2 to 3 coats of polyurethane to the terrazzo in accordance with the manufacturer's instructions. Allow the polyurethane to dry completely per the manufacturer's recommendations before turning on the water.

NOTICE! If the bowl is not completely dry before applying the polyurethane, the polyurethane will not adhere to the surface.

NOTICE! Make sure the surface is complete covered with polyurethane to prevent water from penetrating the surface and damaging the terrazzo.

Repair Kits: Terrazzo repair kits are available. Contact your Bradley representative or distributor for part numbers and pricing.

NOTICE! Do not place acid or alkaline solutions (floor stripper or drain cleaners) into the terrazzo bowl or use them to clean the bowl. If these solutions come into contact with the terrazzo, rinse the bowl immediately with water and inspect for damage. If damage has occurred, follow the directions for restoring the surface. If bowl begins to haze, it is usually a sign that the terrazzo has come into contact with an acid or alkaline chemical or has been exposed to UV radiation. To repair this condition, follow the instructions for restoring the surface.

Cleaning and Maintenance for Bradstone

12/19/2017

Material Description: Bradstone is an extremely durable plastic material made of reinforced thermosetting polyester resins, finely ground inorganic fillers and fade resistant pigments. Bradstone is impervious to most chemicals and stains.

Routine Cleaning: Soap and dirt accumulations should be washed off with detergent cleaners. Abrasive and caustic cleaners are not recommended. An occasional waxing with automotive wax will make future cleaning even easier.

Bowl and Pedestal Assembly (Terrazzo) WF2613

P.O. Box 309 • Menomonee Falls, WI 53052-0309 • 1 800 BRADLEY • 262 251 6000 • bradleycorp.com

This document describes installation of washfountain bowl and pedestal only. Some optional equipment and accessories are shown for clarity. For activation, optional equipment and accessory installation, see installation documents included with those parts.

Before installation of bowl and pedestal assemblies, review all included instructions. Some options may require additional steps during the bowl and pedestal installation process.

Supplies Required by Installer

- (6) 1/2" lag bolts, screws or other fasteners to anchor washfountain pedestal
- 1" hot and cold water or tempered supply lines and fittings (see activation instructions)
- Reducing fittings and 1/2" nom. copper tubing supply lines for types with supplies from above (see activation instructions)
- Standard P-trap (vented trap supplied by Bradley when required)
- 2" drain lines and fittings (see activation instructions)
- 1-1/2" vent pipe on types vented through washfountain column
- · Pipe sealant and plumber's putty

Supply lines for one or two washfountains should be 1"; for three washfountains 1-1/4"; for more than three washfountains, pipe size should increase proportionally. Vent pipe to be 1-1/2" on models vented through washfountain.

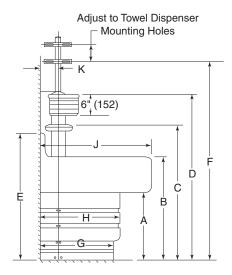

Valving installation for Classic Washfountains require rigid plumbing installation and connections to ensure proper operation and support of the valve assemblies, especially for foot control activated washfountains. Do not use flexible supply hoses unless specified in your activation instruction documentation and supplied with your washfountain.

P.O. Box 309 • Menomonee Falls, WI 53052-0309 • 1 800 BRADLEY • 262 251 6000 • bradleycorp.com

Circular Washfountain Dimensions

(mm)

| | Approximate Dimensions | | | | | | | | | |
|-------------|------------------------|--------|--------|--------|--------|------|-----|-----|--------|--------|
| | Α | В | С | D | E | F | G | Н | J | K |
| Inches | 19 | 29-1/4 | 39-1/8 | 47-5/8 | 36-1/4 | 56 | 26 | 28 | 37-1/4 | 10-1/4 |
| Millimeters | 483 | 743 | 994 | 1210 | 921 | 1422 | 660 | 711 | 946 | 260 |

For juvenile height, subtract 4" from dimensions A-E.

Length of Tie Pipe Required for Vent Through Washfountain Column

| Туре | Pipe Length |
|----------------------------------------------|------------------|
| 54" Less Soap Dispenser | 21-1/2" (543mm) |
| 54" with Soap Dispenser | 30" (762mm) |
| 54" Less Soap Dispenser with Towel Dispenser | 55-1/2" (1410mm) |
| 54" with Soap Dispenser with Towel Dispenser | 48" (1213mm) |
| 54" with Cube Adapter | 32" (813mm) |
| 54" with Cube Adapter with Towel Dispenser | 50" (1270mm) |
| 54" with Cube Adapter and Soap Dispenser | 40" (1016mm) |

Drain must be connected with 2" schedule 40 welded wrought iron pipe, minimum, to provide lower support for this installation. Vent or support pipe must be of the same material in 1-1/2".

P.O. Box 309 • Menomonee Falls, WI 53052-0309 • 1 800 BRADLEY • 262 251 6000 • bradleycorp.com

Bowl and Pedestal Assembly (Terrazzo) WF2613

P.O. Box 309 • Menomonee Falls, WI 53052-0309 • 1 800 BRADLEY • 262 251 6000 • bradleycorp.com

1

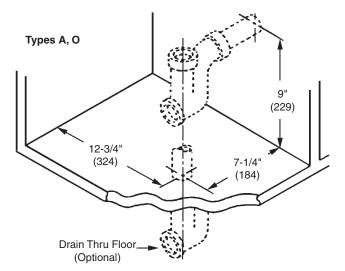

Installing the Drain

Rough in supply and drain piping as required for your installation.

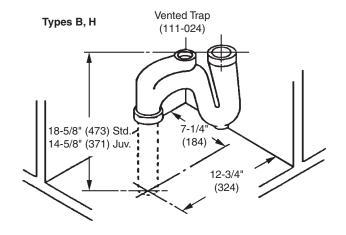

Assemble the drain to the dimension shown below for the bowl size you are installing.

All piping shown in dotted lines to be supplied by installer.

Bowl and Pedestal Assembly (Terrazzo) WF2613

P.O. Box 309 • Menomonee Falls, WI 53052-0309 • 1 800 BRADLEY • 262 251 6000 • bradleycorp.com

2a

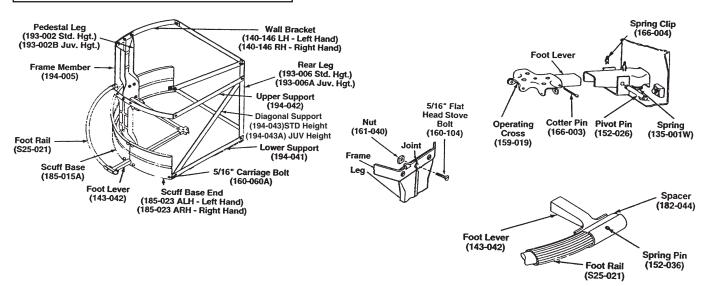

Assembling the Pedestal (with Foot Control)

Assemble the legs and scuff base panels with the 5/16" carriage bolts and nuts provided.

Attach the pedestal frame members, the rear support members and the rear legs with the 5/16" stove bolts and nuts provided.

Add the foot levers and operating cross to the pedestal assembly.

Attach the spacers, foot rail and spring pins to the foot valve levers (the bend in the center of the foot rail must be pointing up).

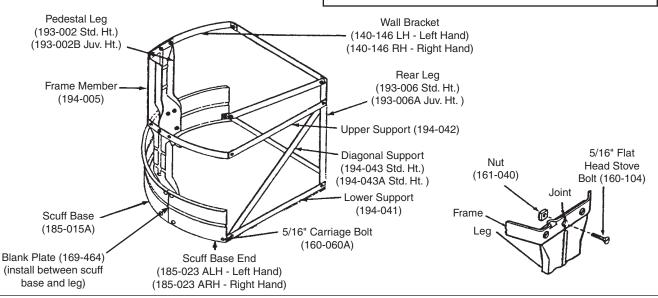

2b

Assembling the Pedestal without Foot Control

Assemble the legs and scuff base panels with the 5/16" carriage bolts and nuts provided

Attach the pedestal frame members, the rear support members and the rear legs with the 5/16" stove bolts and nuts provided.

Bowl and Pedestal Assembly (Terrazzo) WF2613

P.O. Box 309 • Menomonee Falls, WI 53052-0309 • 1 800 BRADLEY • 262 251 6000 • bradleycorp.com

3 Bowl Assembly and Mounting

NOTICE! The pedestal must be level when secured to floor for proper drainage.

ACAUTION! Use suitable lifting equipment to position bowl and pedestal assembly. Handle with care! Failure to do so could result in serious personal injuries.

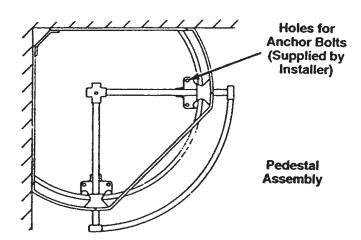

▲ CAUTION! Bowl surface is smooth. Use suitable lifting equipment to position bowl and pedestal assembly. Handle with care!

Position the pedestal assembly.

Anchor the pedestal assembly to the floor with suitable anchors (supplied by installer).

B Place the bowl on the pedestal using suitable lifting equipment.

Installing Drain Spud in Bowl

A Loosely attach the drain spud to the bowl with the locknut and washer.

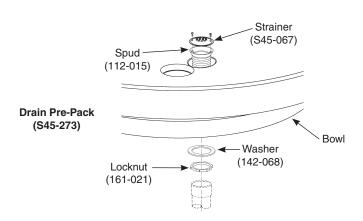

/

Seal between drain spud and drain hole with plumber's putty (supplied by installer).

B Tighten the spud and lock nut against bowl.

C Secure the strainer to drain spud with screws provided.

Connect spud (or B Trap or Tie Pipe Bracket) to drain.

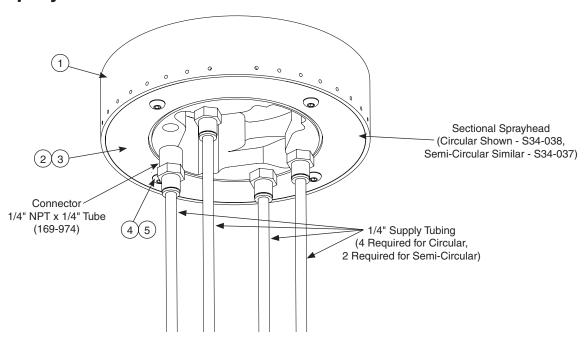

4

Sprayhead Troubleshooting

| Problem | Cause | Solution | | |
|-------------------------------------------|---------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| Water splashes over | Foreign matter has reduced the size of the sprayhead slots, causing greater pressure at the open slots. | Clean the sprayhead: | | |
| the rim of the bowl. | | Disassemble the sprayhead and dislodge any dirt, lime build-up and foreign debris with a wire brush. | | |
| | | Sprayheads with rubber grommet spray rings may be cleaned by rubbing a coin over the grommet. | | |
| | | Throttle down the volume control (water spray should strike the bowl without splashing outside of the bowl). | | |
| Water flow diminishes from the sprayhead. | Strainer portion of the stop-strainer-check valve is plugged. | Remove and clean the strainer screen from the stop- strainer-check valve. | | |
| | | The non-sectional sprayhead includes a perforated neoprene spray ring grommet that is self-cleaning. The water pressure flexes the spray holes which slows accumulation of foreign matter and tends to "break loose" any such deposits that may have accumulated. | | |

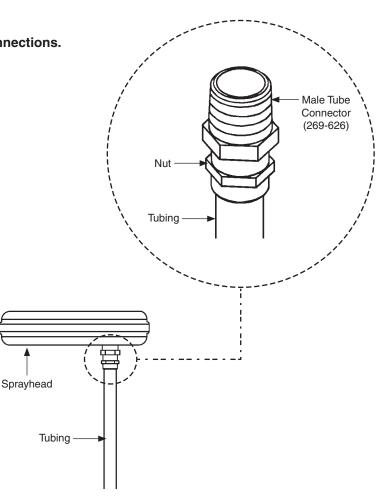

Sprayhead Tubing Connections

▲ WARNING Flush supply lines before making connections.

Using a sharp razor, cut tubing squarely and remove any burrs. DO NOT pinch or crush end of tubing.

Loosen nut on fitting. Moisten end of tube and push into fitting until it is firmly **R** seated. Tighten nut to secure tube to fitting (make sure nut is securely tightened).

If connector leaks, reseat tubing according to above procedure. If leaking persists, replace male connector, or call a Bradley representative for assistance.

P.O. Box 309 • Menomonee Falls, WI 53052-0309 • 1 800 BRADLEY • 262 251 6000 • bradleycorp.com

Supplies Required by Installer

- 110 VAC GFI power source for 120VAC/12VDC plug in adapter.
- OPTIONAL: Bradley recommends installing an electrical cutoff switch to the unit. This feature allows no accidental water delivery during regular maintenance and service.

Pre-Installation Information

Accu-Zone® Infrared Control

The sprayhead is controlled by a solenoid valve, allowing the user to activate a flow of water.

Solenoid Valve

An electronically controlled solenoid valve serves as the metering mechanism. Few moving parts provide reliable metering performance and the solenoid is unaffected by chemicals and minerals often present in municipal water supplies.

▲ WARNING! A DC plug-in adapter (supplied by Bradley) should be used in conjunction with the Accu-Zone sensor. The DC plug-in adapter supplied by Bradley is 12V DC regulated. Direct connection to 120V/220V 50/60 Hz should result in personal injury and will damage the sensor.

Not all equipment shown in this document is available on all washfountains shown within these pages. See Tech Data for optional equipment available for your washfountain.

P.O. Box 309 • Menomonee Falls, WI 53052-0309 • 1 800 BRADLEY • 262 251 6000 • bradleycorp.com

1a

Accu-Zone Infrared Assembly – A and O Drain Units (A Shown)

Δ

Install hemmed end (not sharp end) of support tube with gasket onto bowl.

В

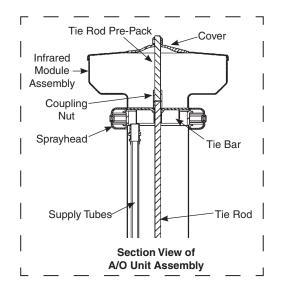

Install restraining bracket on the support tube above the backsplash. Use suitable anchors to attach to wall.

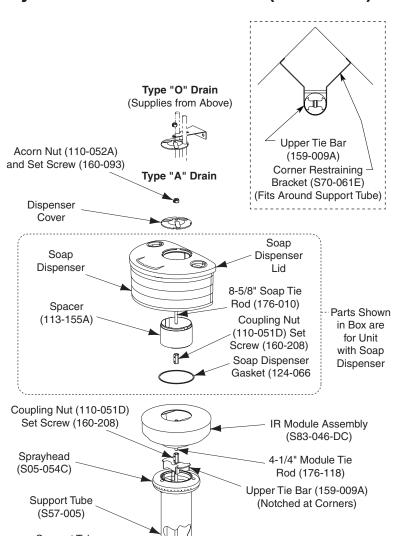

C

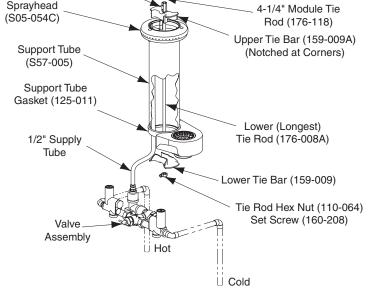

Connect 1/2" supply tubing to sprayhead.

- Using a sharp razor, cut tubing squarely and remove any burrs. DO NOT pinch or crush end of tubing.
- Loosen nut on fitting. Moisten end of tube and push into fitting until it is firmly seated. Tighten nut to secure tube to fitting (make sure nut is securely tightened).
- If connector leaks, reseat tubing according to above procedure. If leaking persists, replace male connector, or call your Bradley representative for assistance.

Assemble the lower tie rod (the longer threaded rod), upper tie bar (notched at corners), lower tie bar, tie rod nut and coupling nut, then attach the 4-1/4" tie rod to coupling nut. Make sure upper tie rod is positioned as shown.

P.O. Box 309 • Menomonee Falls, WI 53052-0309 • 1 800 BRADLEY • 262 251 6000 • bradleycorp.com

Accu-Zone Infrared Assembly – A and O Units (Cont...)

Place the infrared module assembly on top of sprayhead. Rotate until infrared module locks in with tie bar. Drop the infrared sensor cables down into the pedestal.

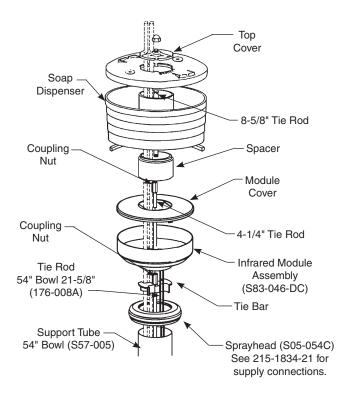

Skip to step H for units without soap.

For units with soap option, install the spacer, soap dispenser and cover using the third tie G rod (8-5/8" long) and second coupling nut. Secure with acorn nut and set screw.

Secure infrared module cover and dispenser cover with acorn nut and socket head set screw.

FOR O UNIT: Install 1/2" nominal copper tubing supply lines (pass them through holes in cover down through support column) and connect to stops using suitable fittings.

Unit with "O" Drain and Infrared Module Shown, Also Available with "A" Drain

Some optional equipment shown.

P.O. Box 309 • Menomonee Falls, WI 53052-0309 • 1 800 BRADLEY • 262 251 6000 • bradleycorp.com

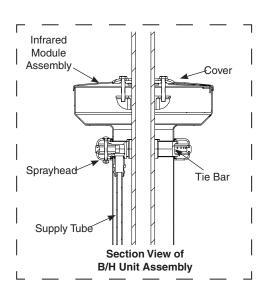

Accu-Zone Infrared Assembly – B and H Units (B Shown)

Install hemmed end (not sharp end) of support tube (welded seam toward intersection of walls) with gasket onto bowl.

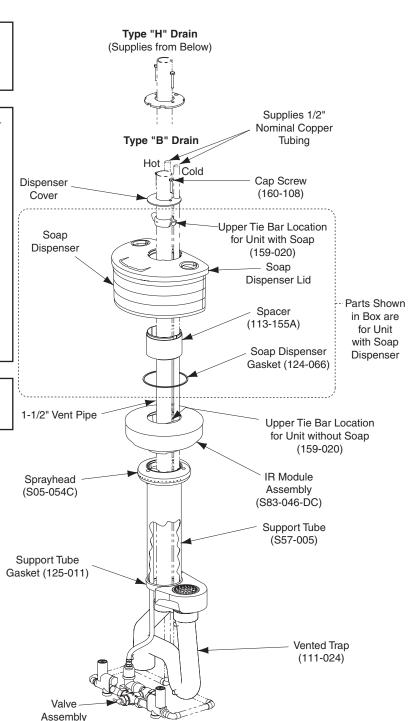

Connect 1/2" supply tubing to sprayhead.

- · Using a sharp razor, cut tubing squarely and remove any burrs. DO NOT pinch or crush end of tubing.
- · Loosen nut on fitting. Moisten end of tube and push into fitting until it is firmly seated. Tighten nut to secure tube to fitting (make sure nut is securely tightened).
- If connector leaks, reseat tubing according to above procedure. If leaking persists, replace male connector, or call your Bradley representative for assistance.

Place sprayhead with 1/2" tubing onto support tube. Run tubing down through support tube.

Some optional equipment shown.

P.O. Box 309 • Menomonee Falls, WI 53052-0309 • 1 800 BRADLEY • 262 251 6000 • bradleycorp.com

Accu-Zone Infrared Assembly – B and H Units (Cont...)

Insert the 1-1/2" vent pipe (supplied by installer) down through the support tube and thread into vented trap.

Ε

Place the infrared module assembly on top of the sprayhead. Rotate until the infrared module locks in with tie bar. Drop infrared sensor cables down to the valve assembly.

Skip to step G for units without soap.

F

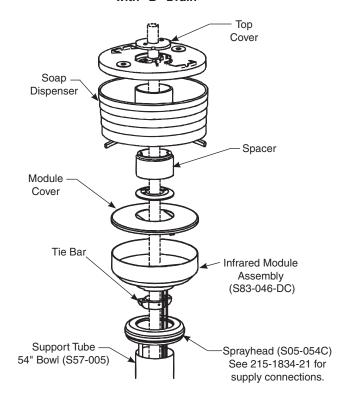

Place the spacer, soap dispenser and cover in position on top of infrared module.

Slide tie bar over 1-1/2" vent pipe 1/2" below top of soap dispenser lid (or infrared module if no soap) and secure with the two cap screws included with the tie bar. Slide the dispenser cover over 1-1/2" vent pipe and secure with the two cap screws included with the tie bar.

Connect vent pipe to vent through ceiling with pipe union.

FOR B UNIT: Install 1/2" nominal copper supply lines (pass through holes in cover and through support column) and connect supply lines to stops using suitable fittings.

Unit with "H" Drain and Infrared Module Shown, Also Available with "B" Drain

Some optional equipment shown.

P.O. Box 309 • Menomonee Falls, WI 53052-0309 • 1 800 BRADLEY • 262 251 6000 • bradleycorp.com

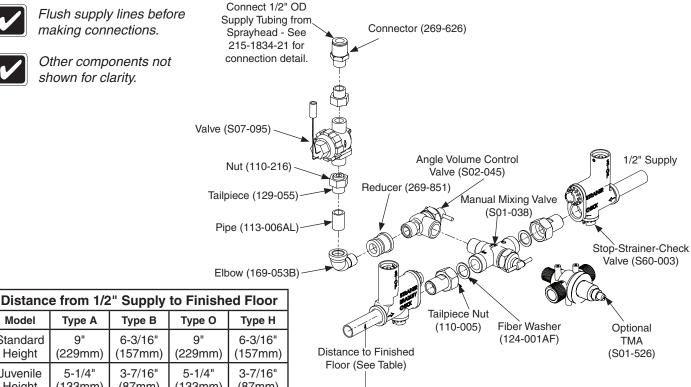

Connect Valve and Tubing for Non-Sectional Accu-Zone Infrared Control

Flush supply lines before making connections.

Other components not shown for clarity.

Model Type A Type B Type O 9" 6-3/16" Standard Height (229mm) (157mm) (229mm) 5-1/4" 3-7/16" 5-1/4" Juvenile Height (133mm) (87mm) (133mm) (87mm)

Connect the stop-strainer-check valves. mixing valve, volume control valve and A solenoid valve assembly to the supplies. Use pipe sealant to seal threads.

For overhead supply lines, install 1/2" nominal copper supply tubing by passing R the lines through the holes in the dispenser cover and down through the support tube.

Using suitable fittings, install the complete valve assembly to the supplies at the approximate height indicated in table.

- Connect 1/2" diameter tubing to solenoid assembly. Connect tube to sprayhead (see 215-1834-21 for connection detail).
 - · Using a sharp razor, cut tubing squarely and remove any burrs. DO NOT pinch or crush end of tubing.
 - · Loosen nut on fitting. Moisten end of tube and push into fitting until it is firmly seated. Tighten nut to secure tube to fitting (make sure nut is securely tightened).
 - · If connector leaks, reseat tubing according to above procedure. If leaking persists, replace male connector, or call your Bradley representative for assistance.

P.O. Box 309 • Menomonee Falls, WI 53052-0309 • 1 800 BRADLEY • 262 251 6000 • bradleycorp.com

2

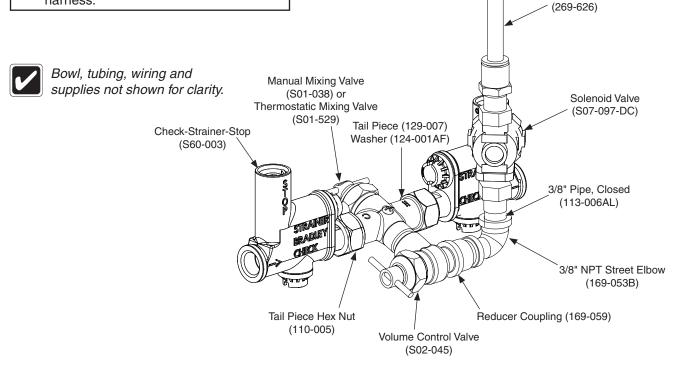

Connect Valve and Tubing for Non-Sectional Accu-Zone Infrared Control (Cont...)

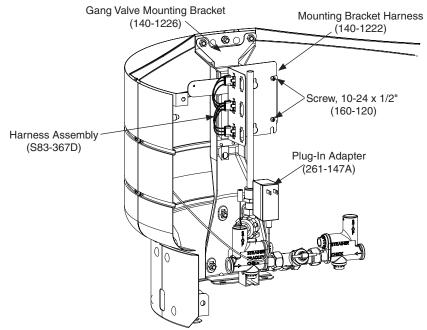

Attach gang valve mounting bracket to leg of pedestal using the nuts from the pedestal assembly.

Assemble harness mounting bracket onto the gang valve mounting bracket using the 10-24 x 1/2" screws. Attach harness assembly to mounting bracket harness.

When tubing and wiring connections (see electrical connections section) are complete, volume control valve is to be used to control spray pattern from sprayhead. Also, verify that each sensor activates the sprayhead.

Connector, Male

P.O. Box 309 • Menomonee Falls, WI 53052-0309 • 1 800 BRADLEY • 262 251 6000 • bradleycorp.com

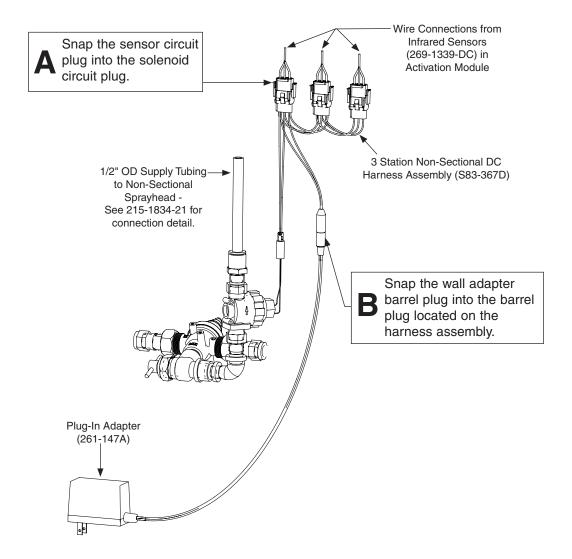

3 Mak

Make Electrical Connections

▲ WARNING! The Accu-Zone Infrared activation must be connected with a 12V DC plug in adaptor. Connections to 110 VAC can cause personal injury and will result in damage to the electronics.

STOP!!! If installing optional Shroud/Slip Ring or Towel Dispensers, complete those installations before proceeding to Step 4 (see Optional Equipment Installation page).

Turn on Water and Electricity, Test and Adjust Unit

Α

Turn on power to plug-in adapter. The solenoid will buzz when a sensor is activated. If no buzz, check wiring.

Turn on water supply and check for leaks. Activate each pushbutton/piezo switch to purge air from the lines.

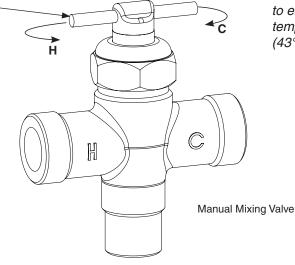

Check to make sure stop valves are open before turning on water.

This valve is NOT factory preset. Upon installation, the temperature of this valve must be checked and adjusted to ensure delivery of a safe water temperature. Water in excess of 110°F (43°C) may cause scalding.

Gently turn the manual mixing valve handle until desired water temperature is reached.

Troubleshooting - Solenoid Valve: Part nos. S07-095

Turn off water supplies to the unit before troubleshooting.

| Problem | Cause | Solution |
|--------------------------------------------------------------|-------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| An individual operating station fails to shut off and drips. | Internal cartridge failure. | Replace cartridge S27-352B. |
| An individual | A failed | Test the station to determine the cause. |
| operating station fails to turn on. | cartridge for the valve or loose electrical connection to the terminal. | 1. Disconnect the wires from the cartridge of an adjacent valve. Disconnect the wires from the problem valve and reconnect to the adjacent valve. |
| | | Turn on electrical and water supplies to the unit. Pass your hand in front of the sensor of the problem station, and the adjacent station should turn on. |
| | | If the adjacent station turns on and cycles normally, replace the cartridge on the problem valve. |
| | | If the adjacent valve fails to turn on, inspect the wires from the sensor cable and do the following: • make sure there are no breaks and that the fully insulated disconnect terminals are firmly crimped in place; |
| | | turn off the electrical and water supplies; reconnect to the adjacent valve and turn on the water supplies to the unit; pass your hand in front of the sensor. If the station still fails to turn on, replace the sensor. |
